SOFTWARE HIGHLIGHT

Following the growing need for quality control in factories, Geonoise has launched NoiseQC, the software for manufacturers wishing to improve their quality control methods and productivity. Through this visually based and easy to use tool, the tests for Go- NoGo and practical statistics are directly available to the user.

IMPROVING QUALITY INSURANCE

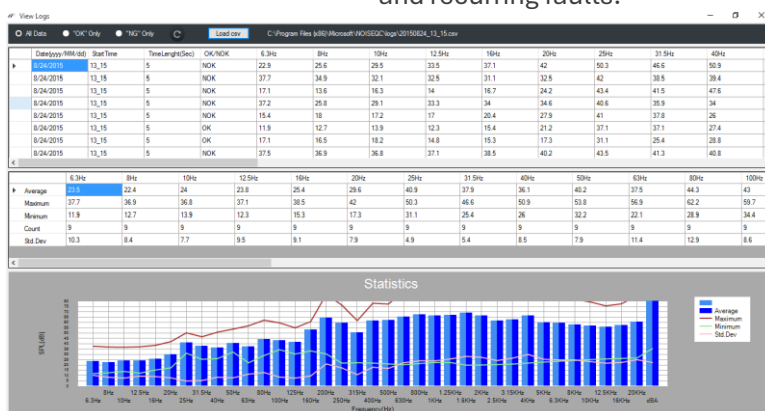

Through the analysis of sounds and/or vibrations, NoiseQC software can objectively analyze the functionality of your products and determine whether the product can be marketed (Go) or has to be set aside for further inspection (NoGo). Together with NoiseQC there is a SoundBOX which can be fitted with either a microphone or accelerometer. Don't hesitate to ask us a list of Norsonic hardware products that are compatible with NoiseQC software.

RECOGNITION OF DEFECTS

Through recognition of recurring defects of your products, you will become acquainted with points of improvement needed for your facilities.

INCREASED YIELD

All products tested by NoiseQC are registered and are consultable both by software and by CSV files. So with an automatic data study, you will know your returns with details and recurring faults.

USER FRIENDLY

NoiseQC is easy to handle and easy to use by the workers in the production line, external triggers are available such as remote start & stop, switch pedal and the push button.

DOWNLOAD OUR DEMO SOFTWARE AND TRY IT FOR FREE!

In www.noiseqc.com you will find tutorial videos and guides of how to use the software. Geonoise also offers a 2 weeks demo downloadable from our website.
