

A/133/V-10 High Temperature, Water cooled Piezoelectric IEPE Triaxial Accelerometer

1mV/g up to 250mV/g $\pm 10\%$ 46gms
900°C max surface temperature *with water flow*

A/133/V-10

Options

A/133/V-3 – flat base block for mounting on flat surfaces
A/133V-10 – raised base for customer modification on curved or irregular shaped mounting surface

The A/133/V IEPE range of voltage triaxial accelerometers feature ultra high temperature usage on surfaces up to 900°C. Developed as solutions for Vibration Measurements on exhaust pipes or engine turbo collectors, they have since found uses in many other high temperature test applications.

Mono-axial versions can also be supplied on request, axis selection to suit customer application.

Water flow is via two titanium pipes and it's recommended that the flow rate of 0.5 litres/min is maintained permanently when in use at high temperature. Failure to do so could lead to injury and damage to the unit.

It is recommended at the highest temperatures a constant supply of chilled cooling water should be used.

The A/133/V consists of 3 mono axial voltage accelerometers mounted into an anodized aluminium block. This allows the advantage of single axis repair if required.

Accessories:
Silicone tubing
General purpose 12V pump

Typical Frequency Response
